

**Brome Avenue Extension**

This alternative  will  will not solve the connectivity for the community.  
✓✓✓✓✓✓✓✓ Why or why not?

NO! It still has traffic coming through the neighborhoods. The 90-degree turns are awful in the winter and the roads are so narrow. (Reference comment 3)

Bike/pedestrian trails need to be considered on all new roadways. (Reference comment 7)

No. (Reference comment 10)

Not a very workable solution. Again this would be very much like the Abby option. (Reference comment 12)

Indirect access to Parks Hwy. (Reference comment 13)

No direct access to highway or major intersection. All traffic would dump onto an interior road. (Reference comment 14)

This doesn't give a true exit to all the subdivision and fails to meet purpose and future needs and doesn't do anything to help queuing at Abby/Fairview Loop. (Reference comment 15)

To much congestion at frontage road. To costly for what is accomplished. Could create a lot of traffic congestion both in and out of subdivision roads that are not prepared for it. (Reference comment 22)

This will not solve the problem as it will add unnecessary traffic to a residential area; thereby creating more problems than it till eliminate. (Reference comment 31)
